

Use GeoLite2 To Create A Searchable IP and GeoLocation Database

Practical Exam

Goal

Maxmind.com provides regular exports of worldwide IP and Geolocation data:

- <https://dev.maxmind.com/geoip/geoip2/geolite2/>

```
curl -s http://ifconfig.me  
88.130.59.75
```

1

```
network,geoname_id,registered_country_geoname_id,represented_country_geoname_id,is_anonymous_proxy,is_satellite_provider,postal_code,latitude,longitude,accuracy_radius  
88.130.59.0/24,2939623,2921044,,0,0,85221,48.2600,11.4340,50  
[...]
```

```

GeoLite2-City-Blocks-IPv4.csv

GeoLite2-City-Locations-[XX].csv

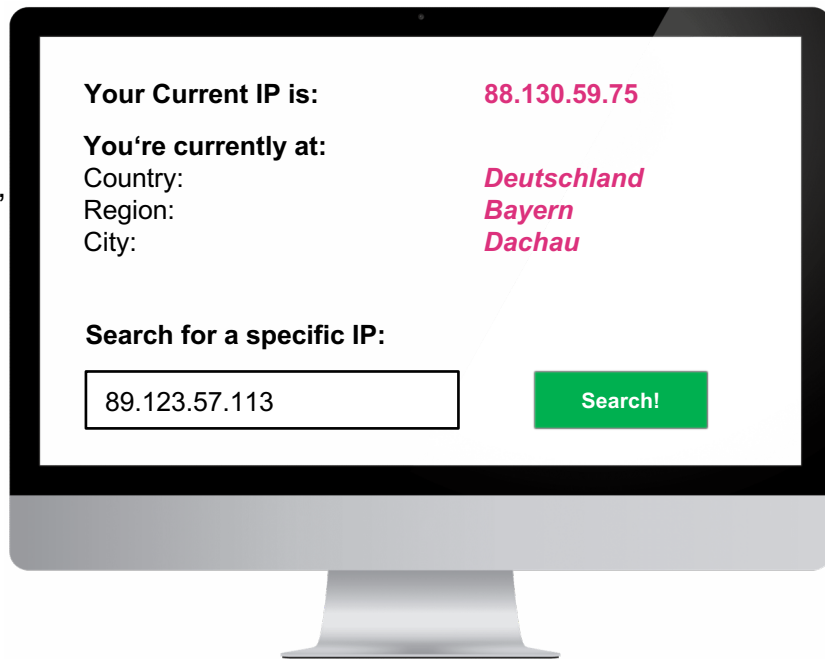

Goal

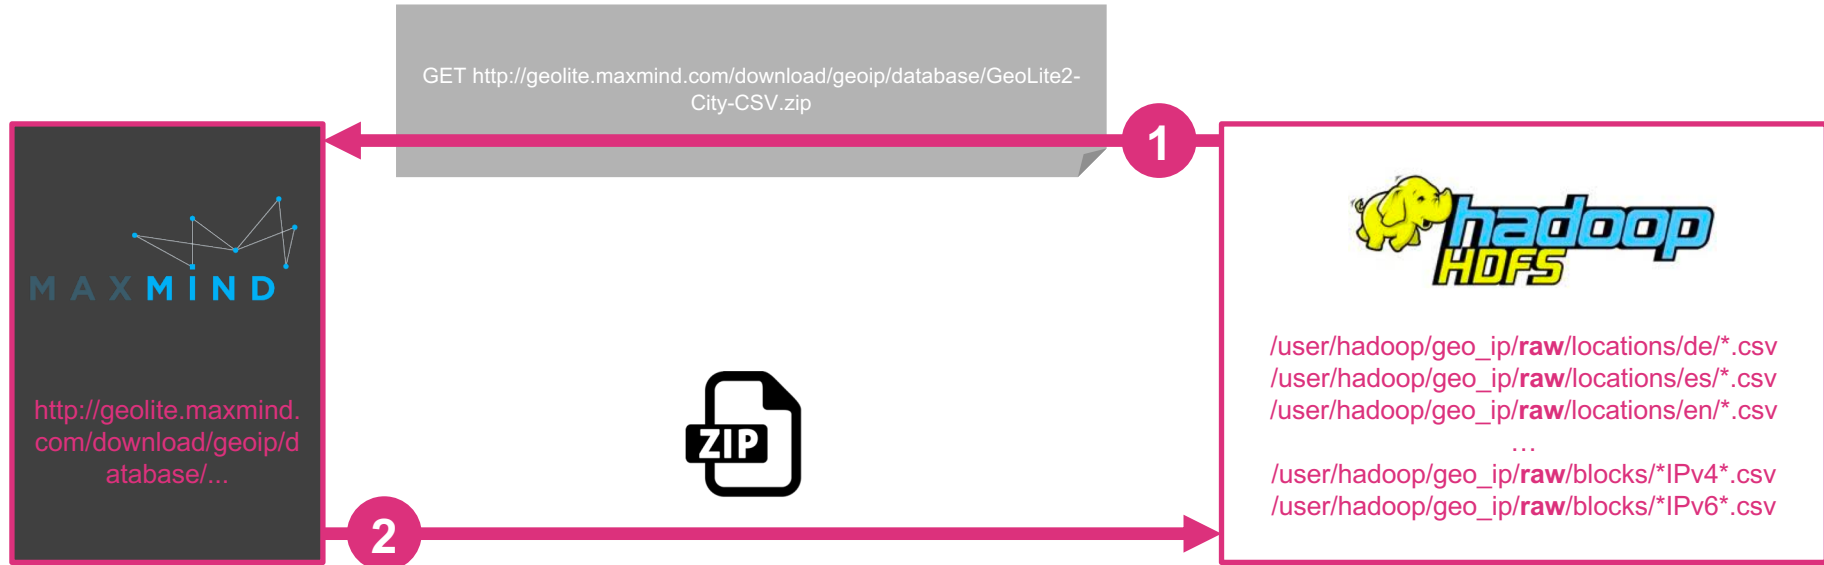

We want to make use of this data to build a real time IP-Geolocation resolution as well as a searchable database for Ips and related Geolocations.

Workflow:

- **Gather data** from maxmind.com
- **Save raw data** (CSV files) to HDFS (partitioned by country code, e.g. *de*, *es*, *en*...)
- **Optimize, reduce** and **clean raw data** and save it to **final** directory on HDFS
- **Export** Geolite2 data to **end-user database** (e.g. MySQL, MongoDB...)
- Provide a simple **HTML Frontend** which is able to:
 - **determine** a user's IP address, **lookup** and **show Geolocation**
 - process user input (IP...) and check against end-user database
 - Display result Geolocation
- The whole data workflow **must be implemented** within an ETL **workflow tool** (e.g. Pentaho Data Integration or Airflow) and **run automatically**

Dataflow: 1. Get Geolite2 Data

Dataflow: 2. Raw To Final Transfer

/user/hadoop/geo_ip/**raw**/locations/de/*.csv
/user/hadoop/geo_ip/**raw**/locations/es/*.csv
/user/hadoop/geo_ip/**raw**/locations/en/*.csv
...
/user/hadoop/geo_ip/**raw**/blocks/*IPv4*.csv
/user/hadoop/geo_ip/**raw**/blocks/*IPv6*.csv

1

- move data from *raw* to *final* directory
- **optimize** and **reduce** data structure for later query purposes if necessary
- remove duplicates if necessary
- ...

/user/hadoop/geo_ip/**final**/locations/de
/user/hadoop/geo_ip/**final**/locations/es/
/user/hadoop/geo_ip/**final**/locations/en/
...
/user/hadoop/geo_ip/**final**/blocks/*IPv4*
/user/hadoop/geo_ip/**final**/blocks/*IPv6*

Dataflow: 3. Enhance Data And Save Results

```
/user/hadoop/geo_ip/final/locations/de  
/user/hadoop/geo_ip/final/locations/es/  
/user/hadoop/geo_ip/final/locations/en/  
...  
/user/hadoop/geo_ip/final/blocks/*IPv4*  
/user/hadoop/geo_ip/final/blocks/*IPv6*
```

1

- enhance data (e.g. for later querying)
- use *Hive*, *Python*, *Spark* or *PySpark*
- save everything to a end-user database (e.g. *MySQL*, *MongoDB*)

Dataflow: 4. Provide Simple Web Interface

- Provide a simple **HTML Frontend** which is able to:
 - **determine** a user's IP address, **lookup** and **show Geolocation**
 - process user input (IP...) and check against end-user database
 - Display result Geolocation
