

## Goal

### Maxmind.com provides regulary exports of worldwide IP and Geolocation data:

GeoLite2-City-Locations-[XX].csv

GeoLite2-City-Blocks-IPv4.csv

## Goal

We want to make use of this data to build a real time IP-Geolocation resolution as well as a searchable database for lps and related Geolocations.

#### Workflow:

- Gather data from maxmind.com
- Save raw data (CSV files) to HDFS (partitioned by country code, e.g. de, es, en...)
- Optimize, reduce and clean raw data and save it to final directory on HDFS
- Export Geolite2 data to end-user database (e.g. MySQL, MongoDB...)
- Provide a simple **HTML Frontend** which is able to:
  - determine a user's IP address, lookup and show Geolocation
  - process user input (IP...) and check against enduser database
  - Display result Geolocation
- The whole data workflow must be implemented within an ETL workflow tool (e.g. Pentaho Data Integration or Airflow) and run automatically

## Dataflow: 1. Get Geolite2 Data

### Dataflow: 2. Raw To Final Transfer

/user/hadoop/geo\_ip/**raw**/locations/de/\*.csv /user/hadoop/geo\_ip/**raw**/locations/es/\*.csv /user/hadoop/geo\_ip/**raw**/locations/en/\*.csv

/user/hadoop/geo\_ip/**raw**/blocks/\*IPv4\*.csv /user/hadoop/geo\_ip/**raw**/blocks/\*IPv6\*.csv

- move data from raw to final directory
- optimize and reduce data structure for later query purposes if necessary
- remove duplicates if necessary
- ...

/user/hadoop/geo\_ip/final/locations/de /user/hadoop/geo\_ip/final/locations/es/ /user/hadoop/geo\_ip/final/locations/en/

/user/hadoop/geo\_ip/final/blocks/\*IPv4\* /user/hadoop/geo\_ip/final/blocks/\*IPv6\*

## Dataflow: 3. Enhance Data And Save Results

/user/hadoop/geo\_ip/**final**/locations/de/user/hadoop/geo\_ip/**final**/locations/es/user/hadoop/geo\_ip/**final**/locations/en/

/user/hadoop/geo\_ip/**final**/blocks/\*IPv4\* /user/hadoop/geo\_ip/**final**/blocks/\*IPv6\*

- enhance data (e.g. for later querying)
- use Hive, Python, Spark or PySpark
- save everything to a enduser database (e.g. MySQL, MongoDB)

# Dataflow: 4. Provide Simple Web Interface

- Provide a simple **HTML Frontend** which is able to:
  - determine a user's IP address, lookup and show Geolocation
  - process user input (IP...) and check against enduser database
  - Display result Geolocation
