

# **Install and Setup Java**

#### 1. Install OpenJDK (JDK 8):

```
sudo apt-get update
sudo apt-get install openjdk-8-jdk
```

#### 2. Verify installation:

```
java -version
openjdk version "1.8.0_275"
OpenJDK Runtime Environment (build 1.8.0_275-8u275-b01-0ubuntu1~20.04-b01)
OpenJDK 64-Bit Server VM (build 25.275-b01, mixed mode)
```

#### 2. SET JAVA\_HOME and JRE\_HOME:

```
sudo vi /etc/environment

JAVA_HOME="/usr/lib/jvm/java-8-openjdk-amd64"

JRE_HOME="/usr/lib/jvm/java-8-openjdk-amd64/jre"
```

# **Setup Hadoop User**

1. Create User:

```
sudo adduser --disabled-password --gecos "" hadoop
```

2. Switch To User:

```
sudo su hadoop
```

3. Switch Back To Root user:

exit

# **Setup SSH** (needed by Hadoop components)

1. Install SSH and PDSH:

```
sudo apt-get install ssh pdsh
```

2. Create Private/Public Keypair for hadoop user (without passphrase):

```
sudo su hadoop
cd
ssh-keygen -t rsa -N "" -f /home/hadoop/.ssh/id_rsa
```

3. Add Public Key To Authorized Keys file (to enable passwordless ssh login)

```
cat /home/hadoop/.ssh/id_rsa.pub >> /home/hadoop/.ssh/authorized_keys
chmod 0600 /home/hadoop/.ssh/authorized keys
```

## **Setup SSH** (needed by Hadoop components)

#### 4. Check If SSH Is Working

```
hadoop@big-data:~$ ssh localhost
The authenticity of host 'localhost (127.0.0.1)' can't be established.
ECDSA key fingerprint is SHA256:YEUFliBVczkz2rvKWnYU9hB2ix2jnhBqLlbsJQfuBpE.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added 'localhost' (ECDSA) to the list of known hosts.
Welcome to Ubuntu 18.04.3 LTS (GNU/Linux 4.15.0-1044-qcp x86 64)
 * Management: https://landscape.canonical.com
                  https://ubuntu.com/advantage
 System information as of Sat Oct 12 15:01:56 UTC 2019
 System load: 0.0
 Usage of /: 5.8% of 28.90GB Users logged in:
                     IP address for ens4: 10.156.0.6
 Memory usage: 2%
 Swap usage: 0%
30 packages can be updated.
17 updates are security updates.
Last login: Sat Oct 12 14:49:27 2019 from 80.144.211.195
hadoop@big-data:~$ exit
Connection to localhost closed.
hadoop@big-data:~$
```

# Install Hadoop

1. Download Hadoop (v3.1.1):

```
wget https://archive.apache.org/dist/hadoop/common/hadoop-3.1.2/hadoop-3.1.2.tar.gz
```

2. Extract Binaries:

```
tar -xvzf hadoop-3.1.2.tar.gz
```

3. Move Binaries:

mv hadoop-3.1.2 hadoop

#### 1. Set Up **UNIX** Environment Variables

```
vi .bashrc
export HADOOP HOME=/home/hadoop/hadoop
export HADOOP INSTALL=$HADOOP HOME
export HADOOP MAPRED HOME=$HADOOP HOME
export HADOOP COMMON HOME=$HADOOP HOME
export HADOOP HDFS HOME=$HADOOP HOME
export YARN HOME=$HADOOP HOME
export HADOOP COMMON LIB NATIVE DIR=$HADOOP HOME/lib/native
export PATH=$PATH:$HADOOP HOME/sbin:$HADOOP HOME/bin
export PDSH RCMD TYPE=ssh
source .bashrc
```

2. Add Hadoop Environment Variables (hadoop-env.sh)

vi /home/hadoop/etc/hadoop/hadoop-env.sh

export JAVA\_HOME=/usr/lib/jvm/java-8-openjdk-amd64

3. Set Up CORE Variables (core-site.xml)

4. Set Up HDFS Variables (hdfs-site.xml)

```
vi /home/hadoop/hadoop/etc/hadoop/hdfs-site.xml
```

```
<configuration>
     property>
            <name>dfs.replication</name>
            <value>1
     </property>
     cproperty>
            <name>dfs.name.dir
            <value>file://home/hadoop/hadoopdata/hdfs/namenode</value>
     </property>
     cproperty>
           <name>dfs.data.dir</name>
           <value>file://home/hadoop/hadoopdata/hdfs/datanode</value>
     </property>
</configuration>
```

#### 5. Set Up MapReduce Variables (mapred-site.xml)

```
vi /home/hadoop/hadoop/etc/hadoop/mapred-site.xml
<configuration>
     cproperty>
           <name>mapreduce.framework.name
           <value>varn</value>
     </property>
     cproperty>
           <name>yarn.app.mapreduce.am.env</name>
           <value>HADOOP MAPRED HOME=${HADOOP HOME}
     </property>
     cproperty>
           <name>mapreduce.map.env</name>
           <value>HADOOP MAPRED HOME=${HADOOP HOME}</value>
     </property>
     cproperty>
           <name>mapreduce.reduce.env</name>
           <value>HADOOP MAPRED HOME=${HADOOP HOME}</value>
     </property>
</configuration>
```

6. Set Up YARN Variables (yarn-site.xml)

```
vi /home/hadoop/hadoop/etc/hadoop/yarn-site.xml
<configuration>
          cproperty>
                    <name>yarn.nodemanager.aux-services</name>
                    <value>mapreduce shuffle</value>
          </property>
          cproperty>
                    <name>yarn.nodemanager.resource.memory-mb</name>
                   <value>16384
         </property>
</configuration>
```

#### 7. Clear HDFS

hdfs namenode -format

#### 8. Start HDFS:

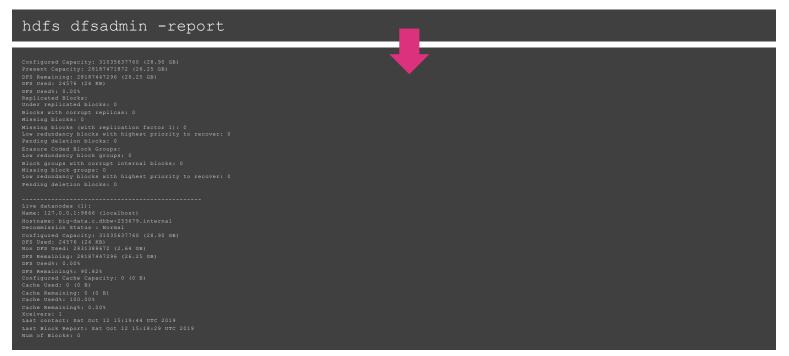

start-dfs.sh

#### 9. Start YARN:

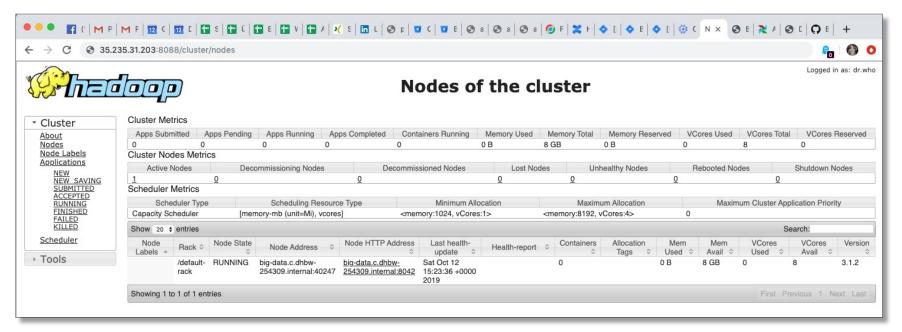

start-yarn.sh

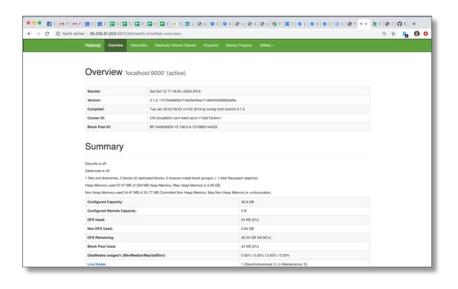

#### 10. Run Admin Status Report

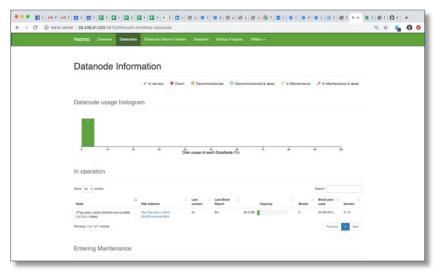

11. Check Ressource Manager Landing Page (<a href="http://xxx.xxx.xxx.xxx.xxx.8088/cluster">http://xxx.xxx.xxx.xxx.xxx.8088/cluster</a>):

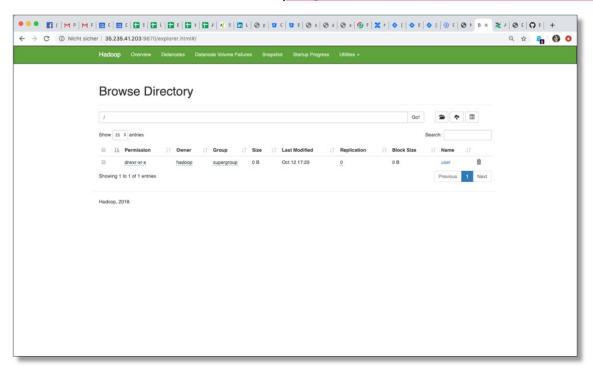

12. Check NameNode Landing and Status Page (<a href="http://XXX.XXX.XXXX.3XXX:9870">http://XXX.XXX.XXX.XXX:9870</a>):

13. Check HDFS File Browser (<a href="http://xxx.xxx.xxx.xxx.xxx.9870/explorer.html#/">http://xxx.xxx.xxx.xxx.xxx.9870/explorer.html#/</a>)

## **Working with HDFS**

#### 1. Create User Directory (on HDFS):

```
hadoop fs -mkdir /user
hadoop fs -mkdir /user/hadoop
```

#### 2. List Directories (on HDFS):

```
hadoop@big-data:~$ hadoop fs -ls /
Found 1 items
drwxr-xr-x - hadoop supergroup 0 2019-10-12 15:29 /user
hadoop@big-data:~$
```

#### **Working with HDFS**

3. Copy File (just a random log file) from local directory to HDFS:

hadoop fs -put /var/log/dpkg.log /user/hadoop/dpkg.log

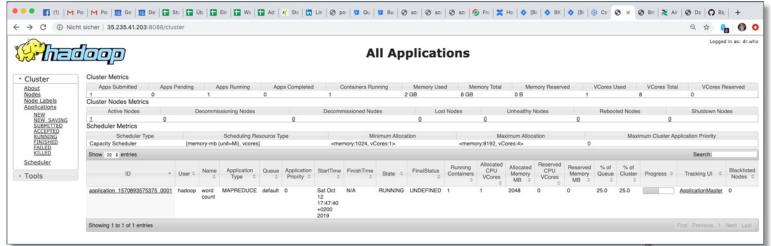

#### Run Example MapReduce Job

1. Using MapReduce WordCount Jar provided by Hadoop to count words within file dpkg.log

hadoop jar hadoop/share/hadoop/mapreduce/hadoop-mapreduce-examples-3.1.2.jar wordcount /user/hadoop/dpkg.log /user/hadoop/test output

2. View Running MapReduce Job:

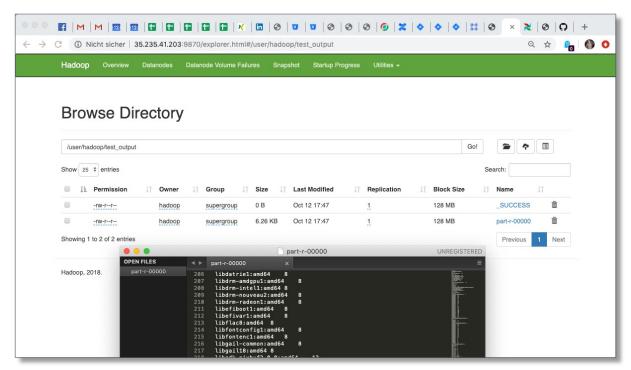

#### Run Example MapReduce Job

#### 3. Take A Look At The Output/Result (*via Bash*):

```
hadoop@big-data:~$ hadoop fs -cat /user/hadoop/test output/part-r-00000
libglx0:amd64 8
libgraphite2-3:amd64 8
libgtk2.0-0:amd64 8
libgtk2.0-bin:amd64 8
libgtk2.0-common:all 9
libharfbuzz0b:amd64 8
libice-dev:amd64 8
libice6:amd64 8
libjbig0:amd64 8
libjpeg-turbo8:amd64 8
libjpeg8:amd64 8
libnss3:amd64 8
libogg0:amd64 8
libpango-1.0-0:amd64 8
libpangocairo-1.0-0:amd64 8
```

#### Run Example MapReduce Job

4. Take A Look At The Output/Result (via Web HDFS File Browser):

#### Exercises

1. Clone git repo (to get sample data):

```
git clone https://github.com/marcelmittelstaedt/BigData.git
```

2.

- Copy sample file (/BigData/exercises/winter\_semester\_2022-2023/01\_hadoop/sample\_data/Faust\_1.txt)
   from Git Repo to HDFS.
- Use and run default MapReduce Jar (hadoop/share/hadoop/mapreduce/hadoop-mapreduce-examples-3.1 .2.jar) to calculate wordcount for text file.
- Copy result of MapReduce job back to local ubuntu filesystem.
- Use and run default MapReduce Jar (hadoop/share/hadoop/mapreduce/hadoop-mapreduce-examples-3.1
   .2.jar) to get the count of occurences of the exact string ,Faust' within text file.
- Copy result of MapReduce job back to local ubuntu filesystem.
- **Tip:** don't use *wordcount* part of jar but another MapReduce program on next slide.

#### Help

#### MapReduce Examples within hadoop-mapreduce-examples-3.1.1.jar:

**aggregatewordcount:** An Aggregate based mapreduce program that counts the words in the input files.

**aggregatewordhist:** An Aggregate based mapreduce program that computes the histogram of the words in the input files.

**bbp:** A mapreduce program that uses Bailey-Borwein-Plouffe to compute exact digits of Pi.

**dbcount:** An example job that counts the pageview logs stored in a database.

**distbbp:** A mapreduce program that uses a BBP-type formula to compute exact bits of Pi.

**grep:** A mapreduce program that counts the matches of a regex in the input. **join:** A job that performs a join over sorted, equally partitioned datasets.

**multifilewc:** A job that counts words from several files.

**pentomino:** A mapreduce tile laying program to find solutions to pentomino problems. A mapreduce program that estimates Pi using a quasi-Monte Carlo method.

**randomtextwriter:** A mapreduce program that writes 10 GB of random textual data per node.

randomwriter: A mapreduce program that writes 10 GB of random data per node.

**secondarysort:** An example defining a secondary sort to the reduce phase.

**sort:** A mapreduce program that sorts the data written by the random writer.

sudoku: A sudoku solver.

**teragen:** Generate data for the terasort.

**terasort:** Run the terasort.

**teravalidate:** Checking results of terasort.

wordcount: A mapreduce program that counts the words in the input files.

wordmean: A mapreduce program that counts the average length of the words in the input files.

A mapreduce program that counts the median length of the words in the input files.

wordstandarddeviation: A mapreduce program that counts the standard deviation of the length of the words in the input files.

# **Stop Your VM Instance**

#
